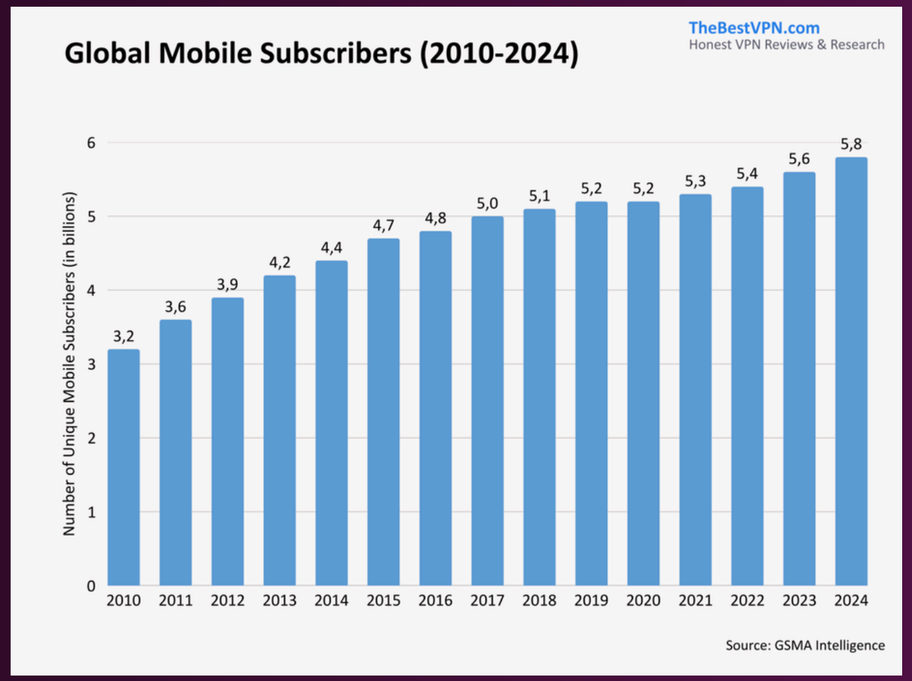
Mobile Apps

- **What Are Mobile Apps?**

  Mobile apps are software applications designed to run on smartphones, tablets, and other mobile devices.
- **Types of Apps**

  There are native apps, web apps, and hybrid apps. Used for entertainment, productivity, much more.
- **Number of users worldwide**

  With 5.8 billion people now using mobile phones, scale alone raises the stakes for privacy. This explosive growth has turned phones into the default way people access the internet. Many users no longer own a computer, the phone is their entire online life – from banking and shopping to streaming and private messaging.



App Development

As for commission costs for app purchases, 15-30% of the sale/purchase is retained in the Apple App Store (iOS). A fee of $99 USD per developer account per year is charged. For Android devices, the Amazon app retains 20-30% of the profits, but unlike Apple, no payment is required for a developer account. On Huawei devices, the commission is 15-30% per purchase, but the difference is that Google services are limited, which could be an impediment if the app needs services like geolocation, Google servers, etc., thus limiting its reach.

Mobile Platform	App Store	Developer Account Cost	Store Commission	Paymen t Type	Notes
iOS	Apple – App Store	$99 USD / year	15% – 30%	Annual	Required membership in the Apple Developer Program to publish apps
Android	Google – Google Play Store	$25 USD	15% – 30%	One-time	One-time developer registration fee
Android	Amazon – Amazon Appstore	$0	~20% – 30%	None	Amazon revenue share varies depending on monetization model
Android	Huawei – AppGallery	$0	~15% – 30%	None	Popular in markets where Google services are limited
